

THE SUN IS BUT ONE ANUS (2010 - 2011)

The living organism, in a situation determined by the play of energy on the surface of the globe, ordinarily receives more energy than is necessary for maintaining life; the excess energy (wealth) can be used for the growth of a system (e.g., an organism); if the system can no longer grow, or if the excess cannot be completely absorbed in its growth, it must necessarily be lost without profit; it must be spent, willingly or not, gloriously or catastrophically.

Georges Bataille, *The Accursed Share*, (p.21 1949)

The Sun Is But One Anus (2010) is located within the notions of the balance between production and consumption, which is allowed due to the surplus energies that is ordinarily received by living organisms.
